

4.7 Descriptive Analysis:

The Table no. 1 examines candlestick pattern predictive capabilities in the Banking sector during a long-term Bullish market.

Hammer shows strong performance when High criteria with trend, High criteria regardless of trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Shooting Star shows strong performance when High criteria with trend, High criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average. And, Hammer shows strong performance when High criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

And, Hammer shows strong performance when High criteria with trend, High criteria regardless of trend, Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average.

Table 1. Candles Observation for Banking Stocks in Bullish Market

The Table no. 2 examines candlestick pattern predictive capabilities in the Banking sector during a long-term Bearish market.

Hammer shows strong performance when High criteria with trend, High criteria regardless of trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Additionally, Shooting Star shows strong performance when High criteria with trend, Low

criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average. Furthermore, Hammer shows strong performance when High criteria with trend, High criteria regardless of trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Furthermore, Hanging Man shows strong performance when Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Additionally, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Likewise, Hanging Man shows strong performance when Low criteria with trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average. Additionally, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average.

Table 2. Candles Observation for Banking Stocks in Bearish Market

The Table no. 3 examines candlestick pattern predictive capabilities in the Hydropower sector during a long-term Bullish market.

Hammer shows strong performance when High criteria with trend, High criteria regardless of trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Shooting Star shows strong performance when Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average. Likewise, Hammer shows strong performance when High criteria with trend, Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Similarly, Shooting Star shows strong performance when Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Additionally, Hammer shows strong performance when High criteria with trend, Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average.

Table 3. Candles Observation for Hydropower Stocks in Bullish Market

The Table no. 4 examines candlestick pattern predictive capabilities in the Hydropower sector during a long-term Bearish market.

Hammer shows strong performance when High criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Hanging Man shows strong performance when Low criteria with trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average. Likewise, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Low criteria regardless of trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Hanging Man shows strong performance when Close criteria with trend is used instead of

picking stocks randomly when we want to pick and hold for 4 Days in average. Additionally, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Low criteria regardless of trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

And, Hanging Man shows strong performance when High criteria with trend, Low criteria with trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average. Similarly, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average.

Table 8. Candles Observation for Expensive Stocks Stocks in Bearish Market

The Table no. 9 examines candlestick pattern predictive capabilities in the Low floating stocks sector

during a long-term Bullish market.

Hammer shows strong performance when High criteria with trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average. Likewise, Hammer shows strong performance when High

criteria with trend, Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Shooting Star shows strong performance when Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Table 9. Candles Observation for Low Floating Stocks Stocks in Bullish Market

The Table no. 10 examines candlestick pattern predictive capabilities in the Low floating stocks sector

during a long-term Bearish market.

Hammer shows strong performance when Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Hanging Man shows strong performance when Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average. Furthermore, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 2 Days in average.

Additionally, Hammer shows strong performance when High criteria with trend, Low criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average. Similarly, Hanging Man shows strong performance when Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average.

Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Low criteria regardless of trend is used instead of picking stocks randomly when we want to pick and hold for 4 Days in average. Additionally, Hanging Man shows strong performance when

Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average.

And, Shooting Star shows strong performance when High criteria with trend, Low criteria with trend, Close criteria with trend is used instead of picking stocks randomly when we want to pick and hold for 8 Days in average.
